The nexus of artificial intelligence and critical security studies: Current issues and future research trajectories

Wednesday, 5 June 2024 13:15 (1h 30m)

The realm of Artificial Intelligence (AI) is known for its dynamic and rapidly evolving nature. International Relations (IR) scholars are actively investigating the diverse impacts of AI on national security, emphasizing crucial factors such as strategic advantage, strategic stability, nuclear deterrence, and the acceleration of technological progress. This roundtable brings together a diverse expertise on critical security implications of AI and explores its various social, economic, ethical, and gender-related aspects. The main aim is to foster a theoretically informed discussion of current trends and future research trajectories and to offer a comprehensive exploration of power dynamics, identity, and insecurities associated with AI.
