## Space Warfare and its Impact on Security and Governance

*Wednesday, 18 June 2025 10:45 (1h 30m)*

This panel explores the role of changing technologies in outer space and their implications for space warfare, security, and governance, and also considers the framings around such technologies and whether they inhibit the pursuit of “responsible” behaviours in outer space. The papers in this panel also investigate the prospects for cooperation amid the looming dynamics of a security dilemma between the major powers in outer space.
