Technology and War –AI and Military Robotics

Thursday 4 June 2026 09:00 (1h 30m)

This panel looks at how AI and military robotics are changing today's security environment, from nuclear decision support to battlefield sensing and drone use in active conflicts. The papers show how states and societies are adapting to rapid technological change, sometimes effectively, sometimes with major misunderstandings. Together they offer a clear picture of the risks, opportunities, and emerging debates shaping the future of drones and autonomous warfare.
